Bur. J. Biochem. 224, 863-871, 1994
A;Title: Characterization of the murine plasma fibrinolytic s A;Reference number: S48202; MUID:95010076; PMID:7523120
A;Accession: S48202
C;Comment: Plasminogen is synthesized by the kidney and is present in plasma and many oft C;Comment: Plasminogen is converted into plasmin by plasminogen activators, both plasminc mediately after dissociation the clot. In the presence of the inhibitor, the activation involves also removal of the activation peptide.
C;Comment: Stromelysin 1 (see PIR:KCMSS1) acts on plasminogen to produce angiostatin. Togethal in treating solid tumors.

plasmin (EC 3.4.21.7) precursor - sheep (
N;Alternate names: plasminogen
N;Contains: miniplasminogen
C;Species: Ovis orientalis aries, Ovis an
C;Species: Ovis orientalis aries, Ovis an
C;Date: 28-Oct-1994 #sequence_revision 01
C;Accession: B61545; S28200
R;Schaller, J:; Rlckli, E.E.
Enzyme 40, 63-69, 1988
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A, Molecule type: protein
A, Residues: 118-460 <SC2>

       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

associated with a lysine binding defect in Lp(a).";

```
RL Biochim. Biophys. Acta 1227:41-45(1994).

CC (ID(a)). It has serine proteinase activity and is able of (ID(a)). It has serine proteinase activity and is able of CC autoproteolysis. Inhibits tissue-type plasminogen activator 1.

CC (ID(a) may be a ligand for megalin/Gp 330.

CC (ID(a) may be a ligand for megalin/Gp 330.

CC (ID(a) may be a ligand for megalin/Gp 330.

CC (ID(a) may be a ligand for megalin/Gp 330.

CC (ID(a) may be a ligand for megalin/Gp 330.

CC (ID(a) may be a ligand for megalin/Gp 330.

CC (ID(a) may be a ligand for megalin/Gp 330.

CC (ID(a) may be a ligand for megalin/Gp 330.

CC (ID(a) may be a ligand for megalin/Gp 330.

CC (ID(a) may be a ligand for megalin/Gp 330.

CC (ID(a) may be a ligand for megalin/Gp 330.

CC (ID(a) may be a ligand for megalin/Gp 330.

CC (ID(a) may be a ligand for megalin/Gp 330.

CC (ID(a) may be a ligand for megalin/Gp 330.

CC (ID(a) may be a ligand for megalin/Gp 330.

CC (ID(a) may be a ligand for megalin/Gp 330.

CC (ID(a) may be a ligand for megalin/Gp 330.

CC (ID(a) may be a ligand for megalin/Gp 330.

CC (ID(a) may be a ligand for megalin/Gp 340.

CC (ID(a) may be a ligand for megalin/Gp 340.

CC (ID(a) may be a ligand for megalin/Gp 340.

CC (ID(a) may be a ligand for megalin/Gp 340.

CC (ID(a) may be a ligand for megalin/Gp 340.

CC (ID(a) may be a ligand for megalin/Gp 340.

CC (ID(a) may be a ligand for megalin/Gp 340.

CC (ID(a) may be a ligand for megalin/Gp 340.

CC (ID(a) may be a ligand for megalin/Gp 340.

CC (ID(a) may be a ligand for megalin/Gp 340.

CC (ID(a) may be a ligand for megalin/Gp 340.

CC (ID(a) may be a ligand for megalin/Gp 340.

CC (ID(a) may be a ligand for megalin/Gp 340.

CC (ID(a) may be a ligand for megalin/Gp 340.

CC (ID(a) may be a ligand for megalin/Gp 340.

CC (ID(a) may be a ligand for megalin/Gp 340.

CC (ID(a) may be a ligand for megalin/Gp 340.

CC (ID(a) may be a ligand for megalin/Gp 340.

CC (ID(a) may be a ligand for megalin/Gp 340.

CC (ID(a) may be a ligand for megalin/Gp 340.

CC (ID(a) may be a ligand for

Homology with plasminogen kringles IV and V is thought to underlie the atherogenicity of the protein, because the fragments are competing with plasminogen for fibrin(ogen) binding. MISCELLANEOUS: Apo(a) is known to be proteolytically cleaved, leading to the formation of the so called mini-Lp(a). Apo(a) fragments accumulate in atherosclerotic lesions, where they may promote thrombogenesis. O-glycosylation may limit the extent of proteolytic fragmentation (By similarity).

SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1. PLASMINOGEN SUBFAMILY. SIMILARITY: Contains at least 10 kringle domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 decorin (By similarity).

ENZYME REGULATION: CONVERTED INTO PLASMIN BY PLASMINOGEN
ENZYME REGULATION: CONVERTED INTO PLASMIN BY PLASMINOGEN
ACTIVATORS, BOTH PLASMINOGEN AND ITS ACTIVATOR BEING BOUND TO
FIBRIN. ACTIVATED WITH CATALYTIC AMOUNTS OF STREPTOKINASE.
MISCELLANBOUS: PLASMIN IS INACTIVATED BY ALPHA-2-ANTIPLASMIN
IMMEDIATELY AFTER DISSOCIATION FROM THE CLOT.
MISCELLANBOUS: IN THE PRESENCE OF THE INHIBITOR, THE ACTIVATION
INVOLVES ONLY CLEAVAGE AFTER ARG-580, RESULTITING IN 2 CHAINS HELD
TOGETHER BY 2 DISULFIDE BONDS. WITHOUT THE INHIBITOR, THE
ACTIVATION INVOLVES ALSO REMOVAL OF THE ACTIVATION PEPTIDE.
SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1. PLASMINOGEN SUBFAMILY.
SIMILARITY: Contains 5 kringle domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Biol.

ENZYME REGULATION: CONVERTED INTO PLASMIN BY PLASMINOGEN

ACTIVATORS, BOTH PLASMINOGEN AND ITS ACTIVATOR BEING BOUND TO

ACTIVATORS, BOTH PLASMINOGEN AND ITS ACTIVATOR BEING BOUND TO

FIBRIN. CANNOT BE ACTIVATED WITH STREPTOKINASE.

PTM: N-LINKED GLYCANS CONTAIN N-ACETYLLACTOSAMINE AND SIALIC ACID.

C-LINKED GLYCANS CONSIST OF GAL-GALNAC DISACCHARIDE WITH IS

MODIFIED WITH UP TO 2 SIALIC ACID RESIDUES (MICROHETEROGENEITY).

MISCELLANEOUS: PLASMIN IS INACTIVATED BY ALPHA-2-ANTIPLASMIN

INMEDIATELY AFTER DISSOCIATION FROM THE CLOT.

SIMILARITY: BELONGS TO PERTIDASE FAMILY S1. PLASMINOGEN SUBFAMILY

SIMILARITY: BELONGS TO PERTIDASE FAMILY S1. PLASMINOGEN SUBFAMILY

IT ACTIVATES THE UROKINASE-TYPE PLASMINOGEN ACTIVATOR, COLLAGENASES AND SEVERAL COMPLEMENT ZYMOGENS; SUCH AS CI AND CS. IT CLEAVES FIBRIN, FIBRONECTIN, THROMBOSPONDIN, LAMININ AND VON WILLEBRAND FACTOR.

-I- FUNCTION: ANGIOSTATIN IS AN ANGIOGENESIS INHIBITOR THAT BLOCKS NEOVASCULARIZATION AND GROWTH OF EXPERIMENTAL PRIMARY AND METASTATIC TUMORS IN VIVO.

-I- CATALYTIC ACTIVITY: Preferential cleavage: Lys-|-Xaa > Arg-|-Xaa; higher selectivity than trypsin. Converts fibrin into soluble
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Bannach F.G., Gutierrez A., Fowler B. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  PRODUCES.

ENZYME REGULATION: CONVERTED INTO PLASMIN BY PLASMINOGEN ENZYME REGULATION: CONVERTED INTO PLASMIN BY PLASMINOGEN ACTIVATOR BEING BOUND TO FIBRIN. CANNOT BE ACTIVATED WITH STREPTOKINASE.

MISCELLANEOUS: PLASMIN IS INACTIVATED BY ALPHA-2-ANTIPLASMIN IMBOIATELY AFTER DISSOCIATION FROM THE CLOT.

MISCELLANEOUS: IN THE PRESENCE OF THE INHIBITOR, THE ACTIVATION INVOLVES ONLY CLEAVAGE AFTER ARG-581, RESULTING IN 2 CHAINS HELD TOGETHER BY 2 DISULFIDE BONDS. WITHOUT THE INHIBITOR, THE ACTIVATION INVOLVES ALSO REMOVAL OF THE ACTIVATION PEPTIDE.

SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1. PLASMINOGEN SUBFAMILY.

SIMILARITY: Contains 5 kringle domains.

ENZYME REGULATION: CONVERTED INTO PLASMIN BY PLASMINOGEN

ACTIVATORS, BOTH PLASMINOGEN AND ITS ACTIVATOR BEING BOUND TO

FIBRIN. CANNOT BE ACTIVATED WITH STREPTOKINASE.

MISCELLANBOUS: PLASMIN IS INACTIVATED BY ALPHA-2-ANTIPLASMIN

IMMEDIATELY AFTER DISSOCIATION FROM THE CLOT.

SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1. PLASMINOGEN SUBFAMILY.

SIMILARITY: Contains 5 kringle domains.

"Identification of the rat Heymann nephritis autoantigen (GP330) as receptor site for plasminogen.";

J. Biol. Chem. 266:10825-10829(1991).

-i- FUNCTION: PLASMIN DISSOLVES THE FIBRIN OF BLOOD CLOTS AND ACTS A PROTEDLYTIC FACTOR IN A VARIETY OF OTHER PROCESSES INCLUDING EMERYONIC DEVELOPMENT, TISSUE REMODELING, TUMOR INVASION, AND INFLAMMATION; IN OVULATION IT WEAKENS THE WALLS OF THE GRAAFIAN FOLLICLE. IT ACTIVATES THE UROKINASE-TYPE PLASMINOGEN ACTIVATOR, COLLAGENASSES AND SEVERAL COMPLEMENT ZYMOGENS, SUCH AS C1 AND C5. IT CLEAVES FIBRIN, FIBRONECTIN, THROMBOSPONDIN, AS C1 AND C5. IT CLEAVES FIBRIN, FIBRONECTIN, THROMBOSPONDIN,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DOMAIN

ENZYME REQULATION: CONVERTED INTO PLASMIN BY PLASMINOGEN

ACTIVATORS, BOTH PLASMINOGEN AND ITS ACTIVATOR BEING BOUND TO

ACTIVATORS, BOTH PLASMINOGEN AND ITS ACTIVATOR BEING BOUND TO

FIBRIN. CANNOT BE ACTIVATED WITH STREPTOKINASE.

MISCELLANEOUS: PLASMIN IS INACTIVATED BY ALPHA-2-ANTIPLASMIN

IMMEDIATELY AFTER DISSOCIATION FROM THE CLOT.

SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1. PLASMINOGEN SUBFAMILY.

SIMILARITY: Contains 5 kringle domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               LAMININ AND VON WILLEBRAND FACTOR. CATALYTIC ACTIVITY: Preferential chigher selectivity than trypsin.

"Crystal structure of the NK1 fragment of human hepatocyte growth factor at 2.0-A resolution.";
Structure 6:1383-1393 (1998).
-i- FUNCTION: HGF IS A POTENT MITOGEN FOR MATURE PARENCHYMAL
HEPATOCYTE CELLS, SEEMS TO BE AN HEPATORPOPHIC FACTOR, AND ACTS
AS GROWTH FACTOR FOR A BROAD SPECTRUM OF TISSUES AND CELL TYPES.

IT HAS NO DETECTABLE PROTEASE ACTIVITY.
-i- SUBUNUT: DIMER OF AN ALPHA CHAIN AND A BETA CHAIN LINKED BY A
DISULFIDE BOND.

ENZYME REGULATION: CONVERTED INTO PLASMIN BY PLASMINOGEN

ACTIVATORS, BOTH PLASMINOGEN AND ITS ACTIVATOR BEING BOUND TO

FIBRIN. CANNOT BE ACTIVATED WITH STREPTOKINASE.

MISCELLANBOUS: PLASMIN IS INACTIVATED BY BLIPHA-2-ANTIPLASMIN

IMMEDIATELY AFTER DISSOCIATION FROM THE CLOT.

SIMILARITY: BELONGS TO PETIIDASE FAMILY S1. PLASMINOGEN SUBFAMILY.

SIMILARITY: Contains at least 2 kringle domains.
